### Tea production

The process of tea production typically involves several stages, including withering, rolling, fermentation or oxidation, drying, and sorting. Withering: The first step in tea production is typically withering, where freshly harvested tea leaves are spread out on large trays or racks to remove some of the moisture. This process can take anywhere from a few hours to several days, depending on the type of tea being produced and the climate. Rolling: After withering, the tea leaves are usually rolled to break down their cell walls and release the enzymes that will cause oxidation. Rolling can be done by hand or by machine, and the level of rolling can be adjusted to produce different types of tea.
