Title	Automatic Sanitizer Machine
Date	15/4/2020
Venue	SNGCE
Coordinator	IEDC
Objective	To engage students in community service activities

An automatic hand sanitizer dispensing machine is automated, non-contact, alcohol-based hand sanitizer dispenser, which finds its use in hospitals, work places, offices, schools and much more. Alcohol is basically a solvent, and also a very good disinfectant when compared to liquid soap or solid soap, also it does not need water to wash off since it is volatile and vaporizes instantly after application to hands. It is also proven that a concentration of >70% alcohol can kill Corona virus in hands. Here, an ultrasonic sensor senses the hand placed near it, the Arduino uno is used as a microcontroller, which senses the distance and the result is the pump running to pump out the hand sanitizer. NSS volunteers helped the work of IEDC SNGCE for this great work.
